WEBSITE QUICKSCAN

Website Quickscan for Kieli.net

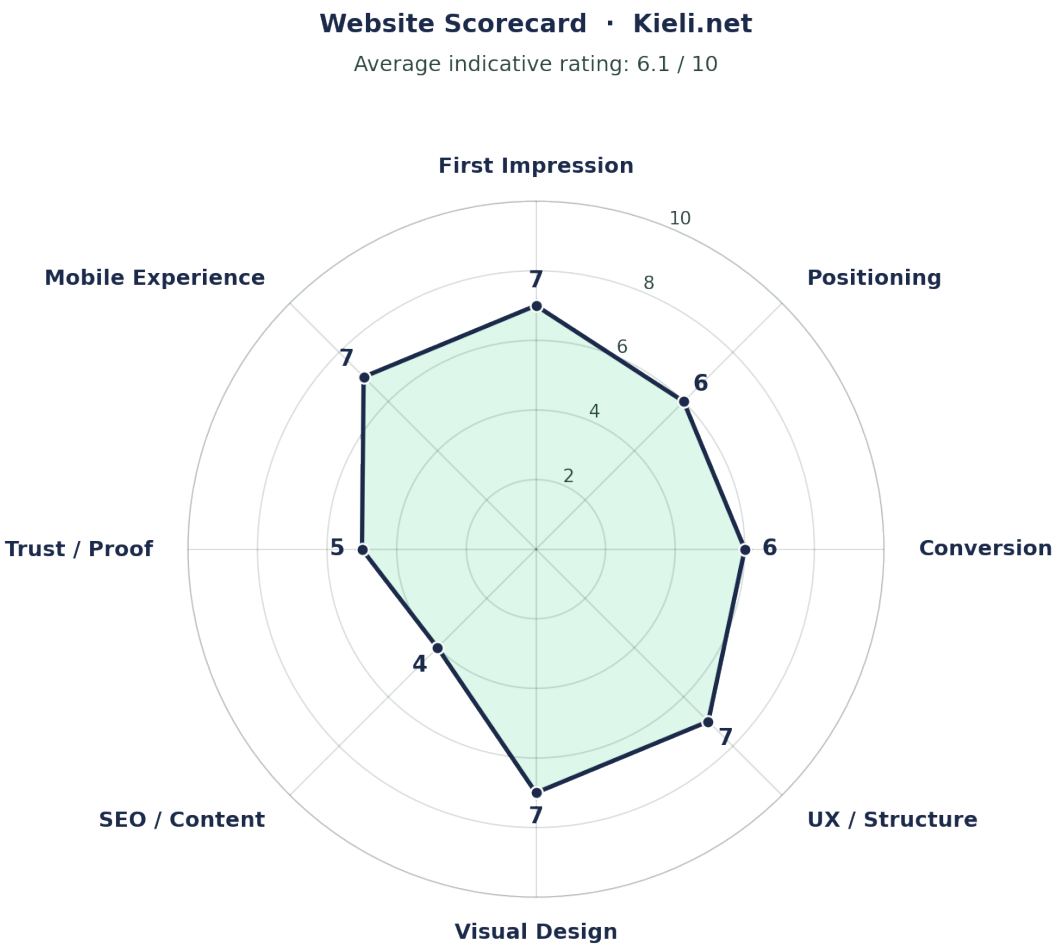

kieli.net · Online platform for learning Finnish · freemium web app · prepared by amai! · 10 August 2026

1. Executive Summary

Kieli.net is a well built online platform for learning Finnish, centred on a genuinely useful word analysis tool, a Reader, an AI chat and interactive exercises, backed by Wiktionary, Wikipedia and Yle integrations. The product is modern, clean and clearly differentiated, and the freemium funnel with a seven day free trial and transparent pricing is a real strength. The main opportunities are not with the product itself but with how it is presented and found. Three things stand out. First, the SEO basics are weak: the homepage title is only Kieli.net and there is little marketing content for a service that should live on organic search. Second, the strong social proof and the flagship value are buried away from the homepage where new visitors land. Third, small signals such as a copyright that still reads 2019 to 2024 make the site feel less maintained than the product actually is. All ratings are indicative and based on the visible elements of the website, not on analytics or performance measurements.

2. Website Scorecard

First Impression		7/10
Positioning		6/10
Conversion		6/10
UX and Structure		7/10
Visual Design		7/10
SEO and Content		4/10
Trust and Proof		5/10
Mobile Experience		7/10

Indicative scorecard per category (0 to 10)

Key takeaway. A modern and genuinely useful Finnish learning platform with a clean product and a solid pricing funnel, held back mainly by weak search visibility and social proof that is not surfaced where first time visitors decide.

3. Overall Impression

The platform communicates its purpose quickly and the core tools are easy to reach from the top navigation. The word analysis tool addresses a real pain point, since Finnish is morphologically rich and generic dictionaries struggle with word forms and cases. The Reader, the AI chat, the exercises and the integrations with Wiktionary, Wikipedia and Yle Selkouutiset give the product real depth, and users themselves praise the clean design and the direct access to words. Precisely because the product is strong, the gaps are on the outside: the homepage undersells the flagship tool, the proof and the free trial are not front and centre, and the search and content foundations that would bring new learners in are largely missing.

4. What Already Works Well

- A genuinely differentiated tool: automatic word stem and case analysis solves a real Finnish learning problem that generic dictionaries do not.
- A clean, modern and easy to navigate interface that users explicitly praise for its simple, direct access to words.
- A clear freemium funnel with a seven day free trial and transparent pricing (monthly, three month and yearly, with the savings shown).
- Real depth through Wiktionary, Wikipedia and Yle integrations plus an AI chat and interactive exercises.

- Credible named testimonials and an eight language interface aimed squarely at newcomers to Finland.

5. Layer by Layer Analysis

First Impression

7/10

Observation. The homepage makes the purpose clear at once and looks modern and tidy, though the hero leads with the Reader and exercises rather than the flagship word analysis.

Commercial impact. The first few seconds decide whether a visitor stays. Leading with the single strongest feature would convert more of that attention.

Recommendation. Open with the word analysis promise and a clear free trial call to action.

Positioning

6/10

Observation. The niche is clear, but what makes Kieli.net better than a normal dictionary and for whom it is ideal stays a little general on the homepage.

Commercial impact. Without a sharp positioning a visitor compares the tool on price and habit rather than on its unique strength.

Recommendation. State the unique value plainly: instant word stem and case analysis for anyone learning or working in Finnish.

Conversion

6/10

Observation. The pricing page is strong with a free trial, three tiers and clear savings, but the homepage funnel and the proof that supports the decision are weaker.

Commercial impact. Every extra step or missing reassurance between arrival and sign up costs trials.

Recommendation. Surface the free trial, the plan comparison and a testimonial earlier in the journey, not only on the pricing page.

UX / Structure

7/10

Observation. Navigation is simple and the three core tools are one click away; users specifically praise how direct the word access is.

Commercial impact. Clear guidance helps learners reach value faster and return more often.

Recommendation. Keep the clean structure and add a short guided first run that shows the word analysis in action.

Visual Design

7/10

Observation. The look is modern, calm and consistent, which fits a study tool and supports trust.

Commercial impact. A tidy, current design signals quality and care, which matters for a paid subscription.

Recommendation. Maintain the current design language and use it consistently across marketing and in app screens.

SEO / Content

4/10

Observation. The homepage title is only Kieli.net, the services page title reads About Kieli.net, and there is no visible blog, grammar guides or per topic landing pages.

Commercial impact. A language tool lives on search demand for specific terms; without titles, meta and content that demand is left to competitors.

Recommendation. Give every page a unique descriptive title and meta description and build a guides and blog layer around real Finnish learning queries.

Performance

indicative

Observation. A real measurement with PageSpeed Insights and the Core Web Vitals was outside this visual review.

Commercial impact. As a client rendered application, load and interactivity on mid range mobiles directly affect both ranking and retention.

Recommendation. Run a measurement and optimise loading, especially the first meaningful content on mobile.

Trust / Proof

5/10

Observation. Named testimonials exist but only on the pricing page, the copyright still reads 2019 to 2024, and there is little company or team information beyond a contact email.

Commercial impact. For a paid subscription, visible proof and an up to date, clearly run service lower the hurdle to enter card details.

Recommendation. Bring testimonials onto the homepage, refresh the year automatically and add clear company, team and cancellation information.

Mobile Experience

7/10

Observation. The site is responsive with a correct viewport and works well on a phone, which suits a tool people reach for while reading Finnish on the go.

Commercial impact. Many learners use the tool from a phone, so a smooth mobile experience is central to retention.

Recommendation. Keep refining the mobile flow for the word lookup and reader so it stays fast and thumb friendly.

6. Key Improvement Opportunities

Fix the page titles and meta tags

Observation. The homepage title is only Kieli.net and the services page title reads About Kieli.net, with no value proposition or keywords.

Why it matters commercially. The title tag is the single strongest on page ranking and click signal for a product that depends on organic search.

Recommendation. Give every page a unique descriptive title and meta description, for example Finnish word analysis, reader and exercises.

Impact: High Effort: Low

Surface social proof on the homepage

Observation. The named testimonials from real users sit only on the get premium page.

Why it matters commercially. First time visitors on the homepage see no proof before they decide whether to try the tool.

Recommendation. Bring two or three testimonials and a simple usage figure onto the homepage.

Impact: High Effort: Low

Refresh stale maintenance signals

Observation. The footer copyright still reads 2019 to 2024.

Why it matters commercially. A dated year suggests the site is not actively maintained, which undermines trust in a paid subscription.

Recommendation. Update the year automatically and add a small changelog or last updated signal.

Impact: Medium Effort: Low

Sharpen the homepage value proposition

Observation. The hero leads with the Reader and exercises and hides the flagship word analysis and the free to premium model.

Why it matters commercially. Visitors decide in seconds, so the strongest differentiator and the trial offer should lead.

Recommendation. Lead with the word analysis promise and a single clear free trial call to action.

Impact: High Effort: Medium

Build a content and SEO layer

Observation. There is no visible blog, grammar guides or landing pages for specific topics.

Why it matters commercially. Learners search for concrete terms such as Finnish cases or kotoutuminen; content captures that demand and feeds the funnel.

Recommendation. Add a guides and blog section targeting high intent Finnish learning queries.

Impact: High Effort: High

Localise the marketing pages

Observation. The interface offers eight translation languages but the marketing copy is English only.

Why it matters commercially. The core audience of newcomers in Finland searches in Arabic, Russian, Somali, Spanish and more.

Recommendation. Add localised landing pages per audience language to capture non English searchers.

Impact: Medium Effort: High

Replace the placeholder video explainer

Observation. The Video explainer opens a modal without a working walkthrough.

Why it matters commercially. An empty placeholder looks unfinished and wastes a strong conversion moment.

Recommendation. Add a short, real product walkthrough that shows the tool in under a minute.

Impact: Medium Effort: Medium

Add structured data and company trust information

Observation. Beyond a contact email and terms there is little company or team information and no schema markup.

Why it matters commercially. Application and FAQ schema plus visible company details raise both search visibility and buyer confidence.

Recommendation. Add schema, an about and team section and clear refund and cancellation visibility.

Impact: **Medium** Effort: **Medium**

7. Impact and Effort

1. Fix the page titles and meta tags
2. Surface social proof on the homepage
3. Refresh stale maintenance signals
4. Sharpen the homepage value proposition
5. Build a content and SEO layer
6. Localise the marketing pages
7. Replace the placeholder video explainer
8. Add structured data and company trust information

Improvement opportunities by impact and effort

The biggest levers sit top left and are quick to implement: fix the page titles and meta tags, surface social proof on the homepage and refresh the stale copyright. Next come the steps with lasting effect: sharpen the homepage value proposition, add structured data and company trust information and replace the placeholder video. The content and localisation work is larger but is where durable organic growth for a language tool is won.

8. Conversion Assessment

The conversion foundation is good. The pricing page is clear, the seven day free trial lowers the risk and the three tiers with visible savings make the yearly plan attractive. The weakness is upstream: the homepage does not lead with the flagship tool or the trial, and the proof that would reassure a first time visitor lives only on the pricing page. Bringing the free trial, a short demonstration and one or two testimonials into the first screen, and keeping a single clear call to action throughout, should turn more of the existing traffic into trials. This assessment is based on the visible elements of the site, not on measured funnel data.

9. SEO and Content Opportunities

- Give every page a unique, descriptive title and meta description instead of the generic Kieli.net.
- Build a guides and blog layer around real Finnish learning queries such as word cases, verb types and integration topics.
- Add localised landing pages for the audience languages the interface already supports.
- Add SoftwareApplication and FAQ structured data so search engines can present the tool richly.

10. Trust and Professionalism

The product earns trust through its quality and through genuine, named testimonials, and the eight language interface signals that it understands its audience. On the website, though, this advantage is partly left unused: the testimonials are hidden on the pricing page, the copyright still reads 2019 to 2024 and there is little visible information about the company behind the service. These are easy signals to strengthen, and once the proof, an up to date footer and clear company and cancellation details are visible, the existing substance becomes a firm reason to subscribe.

11. Recommended Roadmap

Quick Wins (this week): give every page a unique title and meta description, refresh the copyright year and bring two or three testimonials onto the homepage.

Mid term (this month): sharpen the homepage value proposition around the word analysis tool, add a real product video, add structured data and make company and cancellation details clearly visible.

Growth (this quarter): build a guides and blog layer for organic search, localise landing pages for the audience languages and move the whole presence into ongoing optimisation with measured results.

12. Commercial Conclusion

Kieli.net has a strong, differentiated product: a genuinely useful word analysis tool, a Reader, an AI chat and exercises, wrapped in a clean design and a clear free trial funnel. The gaps are on the outside, in how the product is presented and found, not in the product itself.

Most of this is surfacing and optimising rather than rebuilding: sharper titles and content for search, proof and value brought to the homepage and a few trust signals refreshed. Together these should turn more visitors into trials and more trials into subscribers.

This is exactly where amai! supports you: a well maintained, well optimised and conversion focused presence on a fixed monthly plan, including ongoing care and measurement. In a short call we can show you how quickly the first wins can be put live.
